Anthurium 'Arrow'

Anthurium Arrow: dark green arrow shapes with a clear silhouette

Arrow shows no colourful bowl above its foliage. Dark green leaves form distinctive arrows with side lobes, and slender stalks leave air between them.

AI-created scene based on the original shop photograph. Size reference: 12 cm pot · about 40 cm or more total height. Decoration not included; natural development may vary.

Botanical name	Anthurium 'Arrow'
Delivery size	12 cm pot · about 40 cm or more total height
Family	Araceae
Leaf colour	Dark green
Leaf shape	Clearly arrow-shaped with pronounced side lobes
Flowers	No flower heads in the range picture; foliage is central
Life span	Perennial frost-sensitive houseplant
Height	Delivery figure about 40 cm or more overall; no documented final height
Repotting time	When needed during beginning active growth
Position	Bright filtered light, warm and sheltered

Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

Topic	What to do	Why it helps
Light	Bright with filtered daylight.	The clear leaf crown should grow actively.
Warmth	Protect against cold draughts.	The indoor anthurium is frost-sensitive.
Water	Water evenly after slight surface drying.	The root ball decides the next supply.
Cover	Remove remaining water.	Closed containers hide wetness.
Soil	Use a loose structurally stable mixture.	Roots need air pores.
Repotting	Give only slightly more room when roots fill the pot.	Much unrooted soil stays wet longer.
Leaves	Support when dusting and inspect undersides.	Treat arrow lobes and young leaves gently.
Safety	Do not eat; avoid sap contact when cutting.	Anthurium parts may irritate.

Knowledge that grows

An anthurium with a different visual language

Arrow shows no colourful bowl above its foliage. Dark green leaves form distinctive arrows with side lobes, and slender stalks leave air between them. A quiet light wall shows the silhouette especially well. The range name describes the specific foliage plant. No additional species assignment is derived from it. Nor is a particular flower colour promised: the associated original shows foliage. Its attraction already lies in leaf positions, veins and alternation between surfaces and open gaps.

The small container carries a higher crown

The plant is described in a 12 cm pot at roughly 40 centimetres or more total height. Plan sufficient room above and at the sides. A too-tight shelf compartment presses tips and makes removal for care awkward. A stable cover pot may accompany the design but must not hide standing water. Delivery figures describe total height separately from later growth. Support the pot when carrying. New leaves need room to unfold without regularly catching on walls or furnishings.

A bright place maintains leaf patterns

Filtered daylight and steady warmth are a good basis for indoor cultivation. A dark decoration corner is not automatically a lasting plant position. Direct hot sun can strain surfaces. Check through the day instead of only pleasant morning light. Avoid cold draughts and dry heater proximity. Somewhat more humid room air can help, but constantly wet leaves in stagnant air are no goal. The place should allow both quiet development and easy checks of soil and undersides.

The finger test belongs below the crown

Check upper soil and pot weight for water supply. After slight drying, water evenly then let drain fully. Empty the cover afterwards. A small pot may dry faster in warmth while a cooler low-light day lowers consumption. Dark leaf colour says little about this. Even if individual leaves seem limper, inspect the root ball first. Do not soak still-wet soil again out of concern. Preferably soft room-temperature water suits better than cold supplies straight from the tap.

Roots need structure and appropriate room

Use a loose permeable tropical houseplant mixture with suitable coarse ingredients. Keep the plant at its previous height when repotting. A clearly rooted ball receives slightly more room, not an oversized soil container around few roots. Fertilise by label during actual growth. New leaves are a helpful sign. Healthy stalks are not shortened merely to squeeze the crown into an unsuitable compartment. Fully dead parts can be removed gently at their base with clean tools.

Observation keeps the arrow form legible

Remove dust with a soft damp cloth and support the leaf below. Inspect lobes and undersides for changes. Young shoots are softer initially and may stand differently from mature foliage. Save an overall picture and leaf close-up together in the plant book to show development. Anthuriums are not eaten and are placed safe from nibbling children or pets. Protect skin and eyes from sap when cutting. A quiet foliage plant needs no invented flower description to make a complete portrait.

Pictures and details

Good to know

Is Arrow an ordinary red-flowering flamingo flower?

The offer shows a foliage anthurium with arrow-shaped leaves; red flowers are not promised.

What botanical species is it?

The trade name Anthurium Arrow is confirmed. No extra species is fixed without reliable evidence.

May it go on a dark shelf?

A permanent position must receive enough filtered daylight.

Should I shorten healthy stems for a small compartment?

Choose crown space instead; healthy leaves supply the plant.

Is the height a final size?

No. About 40 cm or more denotes the offered total-height reference.
