Blue daisy Blaue Jungs: fine flowers for a sunny edge

Many narrow lilac-blue rays surround the small yellow flower centre. Finely divided green foliage sits beneath the heads, strengthening the impression of a loose cushion.

AI-created scene based on the original shop photograph. Example plants and colour arrangement; decoration not included. Size reference: 3 plants · 11 cm pot each · plant height approximately 20–25 cm.

Botanical name	Brachyscome multifida · Blaue Jungs
Delivery size	3 plants · 11 cm pot each · plant height approximately 20–25 cm
Family	Asteraceae
Flower colour	Blue-violet to lilac with a yellow centre
Flowering period	Summer into autumn in suitable cultivation
Lifespan	Perennial, only limited cold tolerance; frequently used seasonally
Planting time	After frost risk, acclimatise gradually beforehand
Height	Species generally to around 40 cm; delivered plants are smaller
Planting spacing	Around 25–30 cm as a guide for small groups
Position	Sunny, protected and with good water drainage

Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

Topic	What to do	Why it helps
Light	Place in a sunny, protected position.	Fine foliage and flowers need a functioning light position.
Planting	Acclimatise slowly after frost risk.	The small rootball starts without a large root network.
Water	Check the rootball and supply thoroughly as needed.	Drought tolerance does not mean watering is forbidden.
Drainage	Keep container holes open and remove excess.	Wet soil still needs air for the roots.
Soil	Use well-drained planting soil.	Avoid winter and summer wetness.
Shape	Gently pinch young tips.	Further branches can thicken the cushion.
Flowers	Carefully tidy faded flowers.	Healthy fine shoots remain undamaged.
Winter	Continue cultivation protected and preferably frost-free.	No generally safe garden overwintering is promised.

Knowledge that grows

A fine flowering cushion rather than a large flower disc

Many narrow lilac-blue rays surround the small yellow flower centre. Finely divided green foliage sits beneath the heads, strengthening the impression of a loose cushion. Blue daisy *Blaue Jungs* is therefore interesting close up too: individual buds stand among already open flowers, and each shoot adds a slightly different accent. The shop specifies *Brachyscome multifida*. This portrait describes that species and the offered trade selection, not the ordinary white lawn daisy or another *Brachyscome* species with a similar flower.

We plan three small plants as a growing group

The set contains three plants in 11-cm pots approximately twenty to twenty-five centimetres in plant height. This figure is not converted into total height including the pot. At the edge of a sunny window box or in a bowl, the group can develop sideways. Initially place the crowns loosely beside each other and leave room for new branches. Around twenty-five to thirty centimetres spacing is a practical starting point, not an exact width promise for the trade selection. The general species description reaches approximately forty centimetres in height.

A sunny edge with a quiet start

The species from Australia suits a sunny, sheltered position with free-draining soil. Young plants are first introduced to outdoor light and air movement. Permanent outdoor planting happens only after frost risk. Fine shoots can later grow over the edge of a sunny low stone wall. The position should remain accessible: soil must still be checkable beneath the flowering cushion. Hot wall surfaces, a barely ventilated box and wind at the outer balcony edge create different conditions from a protected bed.

Drought tolerance does not mean no supply

Well-established plants cope with drier conditions. A freshly delivered small potted plant, however, does not yet have widely distributed root space. Before watering, we check rootball and pot weight and slowly supply water when needed. Excess drains away. A dry flowering cushion is not merely sprayed from above while roots remain dry. After prolonged rain, actual container condition matters; automatically adding water can be equally unsuitable. If flowers decrease, we consider light and root supply together rather than immediately applying additional fertiliser.

Many fine branches need gentle care

Free-draining planting soil and open drainage holes help combine moisture and air. During growth, feed sparingly according to the label and count existing fertiliser. Young shoot tips can be carefully shortened to encourage branching. Remove faded heads cleanly; after a stronger flowering phase, the plant can be lightly organised. The fine growth should not be pulled from the rootball as a whole bunch. Look underneath the edge for damaged leaves and keep the plant accessible for the next check.

A long season with suitable winter expectations

The species is botanically perennial but is often used here as a summer plant. Generally safe garden overwintering is not promised. For continued cultivation, a bright, sheltered, frost-free position is the cautious choice, especially with small pots. Water use falls in the quieter part of the year. A photograph of the young group of three and a later photograph of its sideways growth fit well in the plant book. Note whether the bowl received sun, wind or rain protection. Actual proven care is then recorded alongside flower colour.

Pictures and details

Images and descriptions from this portrait. Decorative items are not included in the offer.

AI-created detail based on the original shop photograph.
Enlarged crop; not a representation of delivery size.

Original shop photograph of the offered plant. 3 plants · 11 cm
pot each · plant height approximately 20–25 cm.

Good to know

Is it the ordinary lawn daisy?

No. The offer specifies *Brachyscome multifida*.

Does every plant stay exactly 25 cm tall?

No. It is a young plant height, not a mature size guarantee.

Can it grow over an edge?

The species develops branched growth spreading sideways.

Should it be kept dry?

A free-draining position fits, but young rootballs are watered according to need.

Is it annual?

Botanically perennial, often used seasonally here and not generally promised as winter-proof.
