

PLANTS TO READ ABOUT

Five plants. More than one care rule.

Why a Venus flytrap and a tropical pitcher plant should not receive the same winter care.

AI-created home or garden scene based on the article image. Decoration is not included in the delivery.

Grow with knowledge.

A collection for observation and reference. Detailed explanations to help you make care decisions suited to your plant and its position.

Issue September 2026

PLANT CARE GUIDE

Five plants. More than one care rule.

Five plants. More than one care rule.

Why a Venus flytrap and a tropical pitcher plant should not receive the same winter care.

AI-created home or garden scene based on the article image. Decoration is not included in the delivery.

Water	Preferably rainwater
Growing medium	Low in nutrients and suited to the species
Nepenthes	Warm and moist, without standing water
Winter dormancy	Depends on the species

Knowledge that grows

Start with the right species

Carnivorous plants come from different habitats. First identify the species on the plant label. A tropical pitcher plant has different needs from a Venus flytrap.

Low-mineral water and a suitable growing medium

Use clean rainwater if possible. Ordinary fertilised potting compost is unsuitable for many carnivorous plants; use a low-nutrient growing medium suited to the species. Do not routinely add standard houseplant fertiliser.

Not every plant stands in water

Many bog species like very wet conditions during the growing season. Tropical *Nepenthes*, however, need a moist, airy growing medium and should not stand in water. Do not keep the whole set permanently in the same water-filled saucer.

Plan winter care separately

Venus flytraps and many trumpet pitcher plants need an appropriate cool dormant period. Tropical *Nepenthes* stay warm and bright with indirect light. Butterworts and sundews also have different needs depending on the species. The exact species determines the winter position.

Good to know

Can I plant all the species together in one bowl?

Only if their needs really match. Separate pots are the more flexible choice for a mixed starter set.

Do I have to feed the plants?

Regular feeding is normally unnecessary. Do not trigger traps for fun or put food into them.
