Cornus sanguinea 'Midwinter Fire'

Midwinter Fire dogwood: young stems for a lively winter picture

Midwinter Fire wears winter picture on young stems. Small green potted plants become broad deciduous shrub, accompanied by moist soil, sucker space and balanced pruning.

AI-created young green original-based scene. Reference 6 plants/9 cm pot/10–25 cm total pot included. Garden/accessories excluded, no scale photo/winter colour guarantee.

Botanical name	Cornus sanguinea ‘Midwinter Fire’ ·Cornaceae
Delivery	6 plants/9 cm pot/10–25 cm total pot included
Life/habit	Perennial woody deciduous branching/suckering shrub
Future size	Approx. 1.5–2.5 m high/wide guide, site/prune, freely grown may larger
Bloom	Late spring–early summer, development/prune affect set
Flowers	Small creamy–white/whitish in flat clusters
Planting	Prefer autumn, spring also frost–free/not waterlogged earth
Spacing	Hedge approx. 80–100 cm offer, solitary plan future width

Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

Topic	What to do	Why it helps
Arrival	Check small ball/protected care until planting.	Healthy roots first not hard cuts.
Site	Sun/partial shade with moist draining soil.	Light supports bark, permanent wet harms roots.
Plant	Prefer autumn or spring same ball level.	Frost-free workable ground eases rooting/contact.
Space	Hedge approx. 80-100 cm shop, solitary later room.	Young plants become broad branched shrubs.
Water	Check the rootball and garden soil; when dry, water slowly at soil level.	Wet surface no old-pot-ball moisture proof.
Mulch	Loose cover/trunk foot clear.	Holds water without burying shoots.
Prune	Root first, later late winter-spring by vigour.	Young stems colour, strong cut reduces flowers.
Suckers	Check outside intended area early.	Shrub may extend sideways.
Pot	Generous roots/drainage/protected winter site.	Little delivery ball no permanent vessel culture.

Knowledge that grows

Green shrub with a second performance

Starts leafy green: opposite oval pointed leaves on slim shoots, veins gently arching toward tips. Young stalks/stems yellow-green in growth. Autumn changes: after leaf fall yellow/orange stretches with red tips possible. *Cornus sanguinea* Midwinter Fire deciduous branching shrub not permanent orange groundcover. Small whitish late spring-early summer heads if development/pruning allow. Many individual young stems build winter picture by site/season.

Prepare delivery for later spot

Six youngsters 9 cm nursery pots/10–25 cm total including pot, not mature height/finished winter planting. Arrival check moisture, distinguish damaged twigs from normally tender new growth, shield drying until planting. Mature 1.5–2.5 m high/wide useful guide, free may exceed. Spreading/suckering, accessible bed/base/outer shoots rather than cramped paths.

Light and moist ground build stems

Sunny garden supports later bark colour, partial shade possible/weaker effect. Calm green background shows pale twigs without blocking path. Different soils if moisture held/surplus drains. Hot dry wall/narrow soil strip needs more than open prepared bed. Hardiness word alone not enough: young ball/wet ground/exposed pot unlike established shrub. Healthy roots carry future growth.

Loose planting stays accessible

Autumn if unfrozen and not waterlogged, spring also monitor dry-summer transition. Lay pots out first, shop 80–100 cm hedge starting point; solitary future spread. Loosen area/old ball level/slow water. Mulch immediate trunk base free. New shoots beside original base, remove unwanted suckers while manageable. Natural loose group need not continuously tight shear to smooth wall.

Water need in original ball

Small pot earth often dries faster than surrounding ground, feel both while establishing. As needed thorough slow ground water rather than daily wetting leaves only. Surplus after long rain must escape. Established normally moist ground less extra, prolonged drought help. Vessel root space/stability/outlet, future size not permanently delivered pot. Feed only with proper roots/water, poor soil moderate spring dose after cut may help, vessel growth per label.

Balance winter colour and flowers

Established renewal late winter-spring for fresh colourful stems, young first about two years rooting. Actual vigour rather than universal annual radical cut. Longer intervals/selective old stems can rejuvenate. Weak plant improve conditions first. Hard cutting removes possible flower/fruit wood, leave part framework/renew others for both. Clean sharp tool/frost-free timing, protect tender new growth from drying stress.

Watch outside winter too

Spring not colour alone, growth/soil too. New pale leaves firm later, late cold may stress tips. Wilt/wet ball not automatic extra water. Dead twigs/spotted leaves drainage/drought/disease considered together. Autumn change/drop normal deciduous, winter-bearing young twigs revealed. Anny's Winter Orange another named selection stronger orange. Bark colour alone no reliable garden cultivar diagnosis, retain offer association/follow full year.

Pictures and details

Images and descriptions from this portrait. Decorative items are not included in the offer.

At original-based leaf detail, green growth phase not winter-colour cultivar diagnosis.

Clean unchanged young delivery6 plants/9 cm pot/10-25 cm
total including pot, not winter bark effect yet.

Good to know

Orange all summer?

No, leafy phase young yellow-green shoots, striking yellow-orange/red bark especially autumn/winter.

10-25 cm final height?

Young offer total including pot; later 1.5–2.5 m high/wide years guide not fixed limit.

Why space beside hedge?

Spreading/suckers, base access for checking/renewal.

Offer spacing?

Shop approx. 80–100 cm hedge, solitary later width. Not instant dense winter wall.

When hard renewal?

Well-rooted strong plants generally after about two years, then late winter-spring by weather/vigour.

Fewer flowers after hard cut?

Old framework may bear flowers, leave part/renew other for flowers/fruit.

Stay9 cm pot?

Temporary until planting, lasting pot needs more roots/managed moisture/free drainage.
