## Dracaena Lisa: calm green with an attractive upright shape

Lisa brings calm green foliage and a clear upright form into the living area. Stem sections at different heights carry its leaf crowns. A bright warm spot and care based on root-ball moisture help this dracaena develop through many new leaves.

AI-created scene based on the original shop photograph. Cachepot, furnishings and decoration are not included.

### Grow with knowledge.

A collection for observation and reference. Detailed explanations to help you make care decisions suited to your plant and its position.

|                |                                                                                    |
|----------------|------------------------------------------------------------------------------------|
| Botanical name | Dracaena fragrans 'Lisa' (synonym: Dracaena deremensis 'Lisa')                     |
| Delivery size  | One plant · sizes to choose from: approx. 70–90, 90–110 or 130–150 cm total height |
| Family         | Asparagaceae                                                                       |
| Lifespan       | Perennial evergreen houseplant                                                     |
| Leaf colour    | Green without prominent pale lengthwise stripes                                    |
| Growth         | Upright stems with leaf crowns; height increases with cultivation                  |
| Location       | Warm, bright and protected from hot direct sun                                     |
| Caution        | Do not eat plant parts; keep away from children and pets                           |

## Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

| Topic      | What to do                                                                | Why it helps                                                 |
|------------|---------------------------------------------------------------------------|--------------------------------------------------------------|
| Light      | Place brightly with indirect daylight.                                    | A position deep in a dark room leads to weaker growth.       |
| Water      | Let upper soil dry and also check inside the root ball.                   | Thick stems and roots do not tolerate permanent wetness.     |
| Drainage   | Water slowly and thoroughly, then remove excess from the cachepot.        | Standing water can damage roots.                             |
| Soil       | Use structurally stable, freely draining houseplant soil.                 | The root ball needs moisture and air together.               |
| Warmth     | Keep warm and frost-free year-round; avoid cold draughts.                 | Dracaenas are sensitive to cold locations.                   |
| Fertiliser | Dose according to the label during visible growth.                        | Fresh soil and slow winter growth call for adjusted amounts. |
| Repotting  | Move to a suitable next size in spring when root space is densely filled. | A very large amount of new soil stays moist for a long time. |
| Care       | Clean leaves with a soft damp cloth; place beyond pets' reach.            | Dust hides foliage; plant parts are not suitable for eating. |

# Knowledge that grows

## Green leaf crowns rather than loud colour

Lisa appeals through its calm green colour. The long leaves sit in dense crowns at the upper ends of stems and bend softly outwards. Different stem heights give the plant depth. Beside a low wooden cabinet or a reading chair, it looks upright without filling the room with many colours. We like that its form can be recognised from a little distance. Up close, you then see new leaves unfurl from the centre. Healthy foliage remains its ornament even without flowers.

## A choice of sizes is not a plant set

The shop lists Lisa as *Dracaena deremensis*; botanically, it belongs to the *Dracaena fragrans* group. Size choices cover approximately 70 to 90, 90 to 110 or 130 to 150 cm total height. The relevant offer shows which variant can currently be ordered. The original image presents the different sizes side by side. It does not mean three plants are delivered. The home scene shows one smaller delivery form in a decorative cachepot. For the intended position, consider the chosen height together with the later sideways space for the leaves.

## Light still matters with green foliage

A warm spot with plenty of indirect daylight suits it well. Plain green leaves do not permit an arbitrarily dark corner. If a cabinet shades the plant position, a small move further into the light can make a real difference. Avoid hot direct sun after transport or increase it gradually. Cold draughts from a door and the hot airflow directly above a radiator are also unfavourable. Observe the intended place at different times of day. The plant should stand where its leaves receive light and are not constantly bent as people pass.

## The root ball decides the next watering

The upper soil can dry before a new watering. Also check whether the root ball beneath remains moist and the inner pot heavy. Then water slowly and thoroughly and let excess drain completely. A large cachepot can hide water, so look inside deliberately. Use suitable low-lime water at room temperature where possible. A fixed weekday alone does not match changing light and room warmth. Drooping foliage is likewise no clear watering instruction. First compare the soil's condition before giving an already wet plant more water.

## A large plant needs suitable small steps

Structurally stable houseplant soil that drains well makes care easier. Once roots densely fill the current pot, carefully choose a suitable next size in spring. Support the stems and move the root ball as intact as possible. A very large new pot stays moist inside for a long time and is not automatically better. During fresh leaf growth, follow the fertiliser label and account for nutrients already in the soil. Lisa continues growing over time. If its form later becomes too large, targeted pruning can be planned; unnecessary cutting immediately on arrival is not needed for that.

## Leaf surfaces deserve a little attention

Remove dust with a soft damp cloth, supporting the leaf from underneath. Do not pull open young rolled leaves. Completely dead lower leaves can be removed gently. Dry tips may relate to water quality, salt build-up or changing moisture and do not prove a single cause. Check several conditions rather than immediately feeding heavily. Plant parts are not for eating; place Lisa beyond children and nibbling pets. Even an attractive home companion needs a position where everyone in the household can live well with it.

## Winter changes the rhythm, not the enjoyment

During the period of lower light, fewer new leaves usually appear. The spot stays warm and bright while water and feeding are adapted to reduced growth. A large root ball in particular may stay moist longer now. Occasionally look at leaf undersides and inside the crowns so pests are noticed early. A small change does not immediately require several measures. We prefer to watch whether the next leaf appears healthy. With this calm observation, Lisa becomes a familiar plant allowed to develop its shape over a long period.

## Pictures and details

Images and descriptions from this portrait. Decorative items are not included in the offer.

Original shop image with different size variants. One plant is supplied in the selected size, not a three-piece set.

## Good to know

### Are the three pictured sizes delivered together?

No. The shop image shows size variants. One plant is supplied in the selected variant.

### Which heights can I choose?

Approximately 70–90, 90–110 and 130–150 cm total height. Current order availability is stated with each offer.

### Why is it also called *Dracaena fragrans*?

*Dracaena deremensis* is botanically assigned to the *Dracaena fragrans* group. The shop name Lisa is retained.

### Can it stand in a dark corner?

A bright position with indirect daylight is the better foundation. Plain foliage does not replace light.

### How often should I water?

After the upper soil dries and the inner root ball has been checked. Remove excess afterwards.

### Does Lisa suit nibbling pets?

No. Plant parts are not suitable for eating and belong beyond their reach.
