Ficus microcarpa - horticultural Ginseng form

Ginseng fig: root arms and a small crown in glass

Strong root arms carry small green crown. Clear clip-top jar shows fig from many sides. Indirect daylight, checked moisture and space for new branches accompany living design.

AI-created indoor scene from selected original. Jar about 28 cm tall 18 cm wide; furnishings not supplied. DIY set planted yourself.

Botanical relation	Ficus microcarpa, horticultural Ginseng form
Family	Moraceae – mulberry family
Offer	One selected Ginseng fig in Mason Jar DIY set
Container dimensions	Glass approx. 28 cm tall ·18 cm diameter
Plant dimensions	No exact delivery height or pot size stated
Root appearance	Strong visible brown base with side root arms, individually variable
Foliage	Small glossy oval green leaves
Life form	Perennial evergreen tropical woody plant, grows beyond young design
Position	Bright warm indoors with indirect daylight
Winter	Frost-free, demand judged by light/actual growth

Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

Topic	What to do	Why it helps
Light	Bright indirect, keep direct summer sun off glass.	Small closed container can overheat.
Glass moisture	Check soil, bottom layer and condensation before small additions.	No external water outlet.
Airing	Temporarily open for large persistent drops, do not top up.	Wet leaves/excess encourage rot.
Open pot	Let upper soil dry somewhat, thoroughly supply then drain.	Fine roots need moisture/air together.
Soil	Draining stable mix and suitable root room.	Huge wet pot complicates checks.
Feed	Account for fresh soil, moderate by label in growth.	Strong feed quickly fills small glass with shoots.
Shaping	Selectively shorten healthy shoots, gloves.	Crown grows on, milky sap may irritate.
Winter	Bright frost-free, reassess moisture use.	Tropical fig has no cold garden-bonsai dormancy.

Knowledge that grows

Root arms carry small green crown

Ginseng fig draws eye down first. Above moss stands strong brown base with lateral root arms, fine roots tracing lines between. Small crown of glossy oval green leaves sits above. Clear glass keeps form visible from several sides. Ginseng horticultural term for thick-rooted fig associated botanically with *Ficus microcarpa*, mulberry family. Effect comes from balance of base/foliage, not permanently fixed outline. Each plant has own root contour and grows with good care.

From DIY pack into clip-top jar

Selected Mason Jar offer includes Ginseng fig, cushion moss, hydrogranules, activated charcoal, soil, decorative stones and instructions. Glass about 28 cm tall 18 cm wide, container values not exact plant height/pot size. Originals show planted example. Follow enclosed instructions, hold ball not pull roots. Carefully loosen wrapping, check moisture before water. Base stays visible at previous height. Space between crown/glass prevents new leaves constantly touching damp wall.

Plenty of light without hot solar glass

Bright indirect daylight displays roots/leaves. Narrow console near bright window may fit if glass really gets enough light. Beautiful backdrop no substitute. Direct summer sun can strongly heat small jar; check daily sun path. Distance from heaters and cold draught important too. Keep conditions calm after settling. Individual dropped leaves may respond to changes, assessed with root moisture. Darker position/more water not reliable response to every leaf fall.

Glass moisture needs watchful eye

Closed glass retains water longer. Observe surface/lower layers/condensation together before topping up. Light temporary mist differs from large persistent drops and constantly wet leaves. Excess moisture: open lid temporarily or remove condensation with clean cloth, suspend further water. If the rootball really becomes drier add little cautiously and wait effect. Dry wall alone cannot measure soil. Hydrogranules absorb water but provide no external outlet. Strong base justifies neither flooded bottom nor repeated complete drying of fine roots.

Open pot gives water exit

Ginseng fig can grow openly, useful when crown fills glass or moisture difficult. Suitable holed pot with stable draining fig/indoor-tree mix. Airy bark helps structure; oversized reserve pot needlessly wet long. Let upper soil dry somewhat then evenly water the rootball. Drain excess/empty outer cover. Support plant by ball while moving. Heavy glass design lifted by container, not crown/root arms.

Continue crown, keep base visible

New shoots change tree. With strong growth shorten selected long tips cleanly, retain enough healthy foliage. View several sides before cutting. Root arms not branches to bend/cut for nicer figure. Gloves for skin-irritating milky sap. Remove all cuttings from jar and keep away from children/chewing animals. Fresh earth has nutrients already. Later feed by real growth/label, particularly restrained in small glass.

Guide little fig through winter

Frost-free as bright as possible. Cold quarters suited to local garden bonsai wrong for tropical tree. Reduced daylight slows growth with earth remaining moist longer. Reassess demand instead of unchanged summer routine. Remove dead leaves, inspect undersides/branch bases for shields, cottony deposits or fine webs. Yellow foliage alone no cause diagnosis. Moisture, temperature/recent changes help. Photo same front in book makes new branches/root details apparent. Healthy fresh growth shows care correction helped.

Pictures and details

Images and descriptions from this portrait. Decorative items are not included in the offer.

AI-created enlarged original-based detail showing roots/leaves, not larger delivery plant.

Unchanged clean selected original. Planted example, DIY offer.

Good to know

What does Ginseng mean?

Thick-rooted horticultural form with small crown, related to *Ficus microcarpa*; not confirmed independent cultivar here.

Is 28 cm plant height?

No, jar height with about 18 cm diameter. Exact plant dimensions unstated.

Does jar arrive planted?

Selected DIY set with fig/materials, originals possible planted examples.

Does closed jar need weekly water?

Judge soil/bottom/condensation. Moisture persists; small needed additions better than fixed calendar.

What with lasting large drops?

Temporarily open or carefully remove condensation. Do not water while earth too wet.

Can fig outgrow glass?

Yes. New branches need room, gentle pruning or suitable draining open pot may help.
