Botanical name	Muscari aucheri 'White Magic'
Delivery size	50 bulbs for planting · not flowering pot plants
Family	Asparagaceae
Lifespan	Perennial; with an above-ground dormant phase
Flower colour	White flowers from pale green buds
Flowering	Spring; timing depends on weather and position
Expected height	About 15–20 cm when flowering; not delivery height
Planting time	Autumn in unfrozen ground; plant delivered bulbs promptly
Plant spacing	About 5–7 cm in borders as a guide
Planting depth	About 10 cm; follow packaging instructions
Position	Sun to light partial shade; free-draining soil

Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

Topic	What to do	Why it helps
Position	Choose sun to light partial shade.	Fine white flowers stand out against a quiet background.
Soil	Use free-draining compost or loose garden soil.	Moisture and air in the root area belong together.
Planting	Plant about 10 cm deep in autumn.	Consider packaging and real bulb size.
Spacing	Allow about 5–7 cm in borders.	A densely planted display container is planned differently.
Watering	Supply according to soil condition during growth.	Small containers dry faster.
Nutrients	Supplement when needed according to the label and existing reserves.	Pre-fertilised compost does not immediately demand more fertiliser.
After flowering	Retain green foliage until yellowing.	The leaf phase serves the bulb after the display phase.
Division	Redistribute healthy, overly dense groups in summer.	Dormancy makes work on the group easier.

Knowledge that grows

Green buds become white pearls

White Magic brings a pale grape hyacinth to the spring garden. Its small urn-shaped individual flowers open from pale green buds. While white already appears below, the tip may remain green. Narrow leaves, initially fairly upright, accompany them. Later height is roughly 15 to 20 centimetres. A low container on a garden step or a group against a darker background makes this colour change clear. The shop name White Magic remains; the RHS lists the variety under *Muscari aucheri*. It is not a claim of white flowers for any arbitrary blue grape hyacinth.

Fifty bulbs for several pale spots

50 bulbs for planting are delivered. Flower pictures are examples of later development, not a ready-planted bowl included in delivery. Decide whether to create a connected border group or several smaller containers. In borders, roughly five to seven centimetres spacing is a guide. A dense spring container needs its own planning of depth and root space. The whole quantity need not occupy one small bowl. Beside a bench, a well-placed subgroup is often enough to observe emergence close up.

A bright position with reliable drainage

Sun or light partial shade suit White Magic. A bright garden step may lie in a rain shadow, however, while an open border regularly gets wet. Assess light and water together. Soil should hold moisture during growth but drain freely. Containers need open holes; check saucers after rain and watering. A windy position can dry soil faster even when air is cool. Do not put low flowers directly behind dense tall foliage. Otherwise the fine white forms disappear before their brief display is properly noticed.

The white spring group begins in autumn

Plant in autumn in unfrozen ground, roughly ten centimetres deep and tips upwards. Follow delivered packaging and actual bulbs. Trade size classes are not reinterpreted as measured diameters. Loosen the area, settle soil carefully and water a little if dry. A container for several years needs enough compost and free drainage holes. Mark border groups before their above-ground disappearance in summer. Later perennial planting beside them can then proceed without accidentally digging through dormant bulbs or making new deep holes in the same spot.

Water and nutrients during the leaf phase

Active emerging growth needs moisture without waterlogging. Check containers after the last white flowers while leaves stay green. In borders, water additionally if prolonged dryness reaches the root area. Suitable amounts follow soil, rain and container size, not a rigid weekday. Consider nutrients in the compost and supplement when needed according to the fertiliser label. More supply does not make a shaded position a good flowering site. Requirements change after natural dying back. A dormant bowl is therefore not kept constantly moist like an actively growing spring group.

Finished flowering is not finished care

White flowers may be removed after their display, but foliage stays until natural yellowing. Do not cut it off together with faded stalks. Keep a container bright after presentation and check its soil. Later perennials can accompany the transition in a border without immediately shading all green leaves. A detail photograph of the pale green tip and white lower flowers makes a lovely comparison for the plant book. Store unplanted bulbs separately from food; they are ornamental planting material, not a kitchen supply.

Accompany a pale variety over the years

White Magic is perennial and forms groups over time. Healthy bulbs that become overcrowded can be separated and redistributed during summer dormancy. Before such work, check whether weaker flowering relates to shade, premature leaf removal or unsuitable water management. A container is more exposed to winter weather than a garden border and needs a sheltered, well-drained position. Keep drainage open. Record flowering and yellowing in your own garden. The personal annual rhythm is more useful for care than a supposedly always suitable month number.

Pictures and details

Images and descriptions from this portrait. Decorative items are not included in the offer.

AI-created detail view of later flowering; not delivery condition.

Original shop image of later flowering. Offer: 50 bulbs for planting, not ready-planted containers.

Good to know

Are green buds normal?

Yes. The small flowers open from pale green buds to white.

What is the botanical variety name?

The shop says Muscari White Magic; the RHS lists it as Muscari aucheri White Magic.

How tall does it grow later?

Roughly 15–20 cm when flowering, depending on cultivation.

Does the offer contain a planted container?

No. It contains 50 bulbs for planting.

Can I put it away after flowering?

Keep it bright and supply as needed while foliage is green.

When are dense groups divided?

During summer dormancy, with healthy bulbs and a suitable new position.
