Botanical name	Tulipa, trade selection Foxtrot Mix
Delivery size	12 bulbs for planting · not flowering pot plants
Family	Liliaceae
Lifespan	Perennial; repeat flowering depends on selection and cultivation
Flower colour	Pink, cream and yellow according to shop presentation; variable mixture
Flowering	Spring; timing may vary within the mixture
Expected height	Foxtrot is described at roughly 30 cm; not a uniform guaranteed value for every mixed form
Planting time	Autumn while ground is workable
Spacing	At least around two bulb widths as general tulip guidance
Depth	Around two to three bulb heights; follow the exact packet
Position	Sunny and sheltered, free-draining soil

Care at a glance

Observe, check and adapt care to the position and season. This table provides guidance for everyday practice.

Topic	What to do	Why it helps
Position	Choose a sunny wind-sheltered place.	Double flowers remain easier to observe there.
Planting	Plant bulbs in autumn with points upwards.	The later spring display begins with root space.
Depth	Use two to three bulb heights as guidance.	Also follow the exact packet instructions.
Spacing	Allow at least roughly two bulb widths.	Foliage and roots need space.
Water	Supply during emerging growth when soil is dry.	A wet root ball receives no additional reserve watering.
Nutrients	Feed during growth according to the label when continuing cultivation.	Account for existing soil nutrition.
After flowering	Remove spent heads and preserve green foliage.	The bulb phase continues after flowering.
Storage	Keep lifted bulbs dry and airy.	Lift only after foliage dies back; do not eat ornamental bulbs.

Knowledge that grows

A spring picture of soft colour transitions

The shop presentation of Foxtrot Mix combines double tulips in pink, cream and yellow. Several layers of broad petals give the flowers a bowl-like shape. Darker pink edges can stand out against a paler ground. Familiar broad green tulip leaves stand beneath the stems. Beside a pale garden path, the mixture looks welcoming and easy to appreciate close up. The portrait covers a trade mixture. It does not turn this into one cultivar whose exact colour distribution every bulb must repeat.

Twelve bulbs are not a finished flowering tub

The associated assortment contains twelve bulbs for planting. Photographs show a later flowering display; containers and terrace decorations are not part of the planting material. The offer's size grade is not adopted as a bulb diameter measured by us. Distribute bulbs according to available root space. A container should allow foliage and drainage room instead of simply promising as many flowers as possible in a small area. A mixture's colour distribution can differ. Plan its overall effect rather than a fixed number of yellow or pink flowers.

Shelter and soil matter together

A sunny sheltered position makes the later display easy to see. Watch for free drainage too, especially in the wet season. A sheltered terrace can be an attractive cultivation place if its container genuinely has drainage holes. Observe the bed after rain. Double tulip flowers carry more petals than single forms; a quiet location avoids unnecessary strain from strong air movement. Preserve enough room beside the flowers for green foliage, still needed after the finest spring days.

Prepare autumn planting for the spring moment

Plant in autumn into open workable soil, with the bulb point facing upwards. For tulips, roughly two to three bulb heights provides depth guidance; spacing is at least around two bulb widths. Follow the exact packet as well. Until planting, keep material cool, dry and airy. Small groups make the mixture look more natural than a strictly regular line. Mark the planting spot so later garden tasks do not accidentally expose or damage the bulbs.

Flowering is one stage of the annual cycle

During emerging growth, check soil in dry weather. Water as needed without further saturating an already wet root zone. If continued cultivation is planned, supply nutrients moderately during growth according to the label. Remove spent heads but leave green leaves until natural dieback. Neighbouring planting can later partly accompany them without cutting them too early. Repeat flowering depends on the exact selection and suitable cultivation. A beautiful first flowering year does not guarantee the same number of flowers every following spring.

The mixture can look slightly different each spring

Foxtrot is documented as an individual cultivar; these details are not automatically a full cultivar list for the shop mixture. Record actual flower colours, heights and timings of your group in the plant book. Photograph the entire planting and an individual double flower. You can then recognise changes next spring. Lifted bulbs are stored dry and airy only after foliage dies back. Wear gloves for handling and keep ornamental planting material separate from food and beyond curious children and animals.

Pictures and details

Images and descriptions from this portrait. Decorative items are not included in the offer.

AI-created detail of later flowering, not the delivery state.

Original shop presentation of later flowering. Assortment: bulbs for planting, not flowering containers.

Good to know

Will I receive only pink Foxtrot tulips?

The offer is called Foxtrot Mix and shows different shades. An exclusively pink mixture is not promised.

Does the offer contain a planted tub?

No. The associated assortment contains twelve bulbs for planting.

Are all mixed tulips exactly 30 cm tall?

No. The specialist value for Foxtrot is not adopted as a uniform promise for every form in the mixture.

When do I plant the bulbs?

In autumn while the ground is workable.

Should I cut everything off after flowering?

Remove spent heads but preserve green leaves until natural dieback.
